

MOCK TEST: TRAINING IN SPORTS

PE Class 12 | Chapter 10 | Peak Performance Strategy

MARKS: 50 TIME: 1 HOUR CHAPTER 10

SECTION A: Very Short Answer (1m)

Q1 • 1 MARK

What is the principle of specificity in sports training?

Q2 • 1 MARK

Name one method of endurance training.

Q3 • 1 MARK

Define "periodization" in the context of athletic training.

Q4 • 1 MARK

List one component of a proper warm-up routine.

Q5 • 1 MARK

What is the role of rest in training programs?

SECTION B: Short Answer (3m)

Q6 • 3 MARKS

Explain the principle of overload with an example from strength training.

Q7 • 3 MARKS

Discuss the importance of flexibility training. Provide one exercise and benefit.

Q8 • 3 MARKS

Describe the continuous training method. Mention suitability and one advantage.

Q9 • 3 MARKS

How does interval training improve cardiovascular fitness? Give one example.

Q10 • 3 MARKS

Outline the phases of periodization (Preparation, Competition, Transition).

SECTION C: Long Answer (5m)

Q11 • 5 MARKS

Elaborate on the principles of training (Overload, Specificity, Progression, Reversibility).

Q12 • 5 MARKS

Analyze training methods: Continuous, Interval, Circuit, and Fartlek. Benefits and uses.

Q13 • 5 MARKS

Explain Periodization: Microcycle, Mesocycle, and Macrocycle. Importance in peaking.

SOLUTIONS / REVISION KEY

A1: Training must match sports demands (e.g., swimming for swimmers).

A2: Continuous Training or Fartlek Method.

A3: Systematic planning of training to reach peak performance at specific times.

A4: Light jogging or dynamic stretching.

A5: Allows tissue repair and prevents overtraining injuries.

B6-10 Briefs: Overload is pushing beyond comfort. Continuous training builds aerobic base for marathons. Interval training improves heart efficiency via 'run-rest' cycles. Transition phase ensures mental and physical recovery.

C11-13 Deep Dive: Principles prevent plateaus. Circuit training builds whole-body agility. Periodization prevents burnout: Micro (week), Meso (month), Macro (year). Tapering before an event ensures an athlete isn't fatigued on D-day.
