OFFICIAL ANSWER KEY

Section A:

1. To prevent or manage chronic conditions like diabetes, hypertension, and obesity through holistic practices.
2. Hypertension (high blood pressure).
3. Pranayama is the practice of controlled breathing techniques to regulate energy and improve respiratory health.
4. Dhanurasana (Bow Pose), which stimulates the pancreas and aids in blood sugar regulation.
5. It reduces stress and anxiety, lowering heart rate and blood pressure to prevent heart-related issues.

Section B:

6. Yoga enhances metabolism, reduces stress-eating, and improves digestion. Example: Surya Namaskar (Sun Salutation).
7. Mechanisms: Lowers cortisol levels and improves blood circulation, improving autonomic nervous system balance.
8. Improves insulin sensitivity. Example: Halasana (Plow Pose) massages abdominal organs.
9. Reduces anxiety/depression linked to heart issues. Example: Meditation calms the mind.
10. Steps: Sit comfortably, inhale deeply, hold briefly, exhale slowly, repeat for 5-10 mins.

Section C:

11. Basis includes cortisol modulation and vagal stimulation. Studies show lower BP and improved insulin sensitivity.
12. Tadasana/Bhujangasana for metabolism/heart strength. Anulom Vilom reduces inflammation and lipid profiles.

13. Holistic integration of Asana (physical), Pranayama (breathing), and Meditation (mental/spiritual). Addressing root causes like stress.
