

Yoga as a Preventive Measure: A Visual Guide for Class 12

1. Obesity (मोटापा)

A condition of excessive body fat (BMI 30+), increasing heart disease, high BP, and diabetes risks.

Tadasana

Basic standing pose improving posture, strengthens thighs and ankles, and helps reduce belly fat.

Katichakrasana

Standing twist improving spine flexibility, helps with constipation, and managing obesity.

Pawanmuktasana

Reclining pose aiding digestion, relieves gas and constipation, and helps reduce fat in the abdominal area.

Helasana (Plough Pose)

Full-body stretch reducing belly fat, improving memory, and managing obesity.

Context Summary

Yoga serves as a powerful holistic practice for maintaining health and preventing diseases. An 'Asana', as defined by sage Patanjali, is a comfortable and steady posture (Sthiram Sukham Asanam). This guide explores asanas as preventive measures for five key lifestyle diseases.

Universal Asana Guidelines

General Benefits: Improves posture, redress stress & anxiety, contributes to overall health.

Common Contraindications: Caution for pregnant women and high BP. Always check specific contraindications.

How to Describe Procedure: Visualize the posture and describe steps in your own words, avoid rote memorization.

2. Diabetes (मधुमेह)

Chronic disease where the body cannot regulate blood sugar due to insufficient or ineffective insulin.

Bhujangasana (Cobra Pose)

Back bending pose improving circulation, managing diabetes by stimulating abdominal organs.

Gomuthasana (Cow Face Pose)

Seated pose stretching multiple parts. Leuchstol for managing diabetes.

Shalabhasana (Locust Pose)

Lying on stomach, strengthens back, improves stamina, and helps remove extra fat from the abdomen and waist.

Kapalbhati (Shali Ellining Breath):

Pranayama energizing the body, improving lung capacity, and aiding diabetes management.

3. Asthma (दमा)

Chronic respiratory disease with narrowed, inflamed airways and mucus accumulation, causing breathing difficulties.

Urdhva Hastasana

(Raised Hands Pose): Stretches the body, improves digestion, and enhances lung capacity for better breathing.

Vakrasana (Twisted Pose)

Seated twist improving spinal cord function, controlling diabetes, and beneficial for asthma.

Matsyasana (Fish Pose)

Reclining back-bend stretching neck and shoulders, very helpful for respiratory issues like asthma.

Anulom Vilom

(Alternate Nostril Breathing): Solving pranayama puffing energy channels, inducing fitness, and significantly benefiting respiratory function.

4. Hypertension (उच्च रक्तचाप)

High Blood Pressure condition with consistently high force against artery walls (A normal range is around 120/80 mmHg).

Ardha Halasana

(Half Plough Pose): Lying on back with legs at 90 degrees, improves digestion, tones thighs, and manages hypertension.

Makarasana

(Crocodile Pose): A relaxing pose where one lies on the stomach. It calms the body and making it effective for reducing high blood pressure.

Shavasana

Ultimate relaxation pose. Lying flat on back to calm the mind, improve mental health, and normalize blood circulation, directly combating hypertension.

Sitali Pranayama

(Cooling Breath): A breathing technique where air is inhaled through a U-shaped tongue. It has a cooling, as excellent for lowering blood pressure.

5. Back Pain & Arthritis (पीठ दर्द और गठिया)

Back pain (often muscle strain) and Arthritis (joint inflammation) causing pain, swelling, and stiffness.

Ardha Chakrasana

(Half Wheel Pose): Standing back-bend increasing lung capacity, improving spine flexibility, and relieving back pain.

Ustrasana

(Camel Pose): Kneeling back-bend improving spine flexibility, relieving lower back pain, and reducing stomach fat.

Sural Matsyasana

(Easy Fish Pose): Simpler fish pose beneficial for spinal problems, slip disc, and relieving back pain.

Bhadrasana

(Grocer's Pose): Seated pose strengthening the spine, improving digestion, and relieving back pain and arthritis by stretching hips and ankles.
