

COMPARATIVE DEVELOPMENT EXPERIENCES

India, China, and Pakistan | NCERT Based Basic Learning

CREATED BY THUNDERSTUDY 

This chapter compares India, China, and Pakistan—like comparing three students who started school together but studied differently. All started development almost together (1947/1949), but today their results are different.

1. Development Paths

India: Democratic, Mixed Economy, Focus on Services (IT/Banking). "Slow but steady student."

China: One-party Govt, 1958 Great Leap Forward (Industry), 1978 Reforms. "Fastest growth student."

Pakistan: Mixed Economy, heavy dependence on foreign aid and remittances. "Irregular performance student."

2. Growth and Sectors

Country	Growth Driver	Special Feature
China	Manufacturing / Industry	Followed path: Ag → Industry → Service
India	Service Sector	Jumped directly from Ag to Services
Pakistan	Service Sector (Moderate)	Early growth later slowed down

3. Demographic & Human Development

 **Population:** China used "One-Child Policy" to control growth; Pakistan has the highest growth rate.

 **HDI:** China leads in Life Expectancy, Literacy, and Poverty Reduction.

 **Liberty Indicators:** We also measure "freedom"—like voting rights and free speech—where India stands out.

4. Turning Points (Economic Reforms)

Country	Reform Year	Reason for Success (China Focus)
China	1978	Strong health/education base before reforms
Pakistan	1988	Political instability affected long-term results
India	1991	Shift toward Liberalisation (LPG)

FINAL COMPARISON

China = Leading in Industry & Human Dev

India = Leading in Services & Democracy

Pakistan = Facing Economic Instability
