

ENVIRONMENT & SUSTAINABLE DEVELOPMENT

Indian Economic Development | Class 12 Basic Learning

CREATED BY THUNDERSTUDY 🌱✨

1. What is Environment?

Everything around us that supports life. It includes **Biotic** (living things like trees/animals) and **Abiotic** (non-living things like air/water).

2. Functions of Environment

1. **Gives Resources:** Food, water, minerals, fuel.
2. **Absorbs Waste:** Nature cleans pollution (until it's too much).
3. **Supports Life:** Biodiversity keeps the planet working.
4. **Beauty & Comfort:** Scenery makes life pleasant.

3. Major Problems & Global Warming

Global Warming: Earth getting hotter due to greenhouse gases. Leads to melting ice and floods.

Ozone Depletion: CFC gases from ACs/fridges damage the protective layer, letting harmful UV rays in.

4. Sustainable Development (★ Exam Favorite)

Definition: Meet present needs without harming future generations. Develop today WITHOUT destroying tomorrow.

The Strategy: Use Solar power, Wind energy, CNG, and LPG/Gobar gas instead of coal and petrol.

@thunderstudy

5. Strategies for Sustainability

- 🌱 **Solar & Wind:** Non-conventional energy with less pollution.
- 🌱 **CNG/LPG:** Cleaner fuels for cities and rural kitchens.
- 🌱 **Traditional Knowledge:** Using biocomposting and neem-based pest control (Ayurveda approach).
- 🌱 **Biopest Control:** Using birds and natural methods instead of chemicals.

FINAL ONE-LINE IDEA

"Growth without caring for nature is a future crisis. Balance is the key."
